

The scientific and technological objectives of ROBOFOOT are addressed through **7 work packages** to be developed during **30 months**.

In the Figure below the inter-relations among the WPs is shown. The work packages are broken down in defined tasks with their own task leaders according to their specific role within the project. **Five of them correspond to RTD activities (WP1 to WP5), one to Demonstration (WP6) while management and dissemination activities are grouped in WP7**.

The RTD phase is divided into three sub-phases: WP1 (User Requirements and Scenario definition), WP2 (Manufacturing Process re-engineering), and WP3 (Manipulation and grasping). WP4 (Sensor based Robot control and programing) and WP5 (Scenario development and validtion) are also part of the RTD phase. WP6 (Robot assisted footwear produ demonstrator) is part of the DEM phase.
